# SPECIFICATION SHEET

# Dissolved Oxygen Analyzer (4-wire system)

**OBM-162A** 

The OBM-162A is a 4-wire dissolved oxygen analyzer housed in a robust, die-cast aluminum enclosure, making it ideal for installation and use out in the field

The meter has double circuit (incl. water temperature) transmission output 4 to 20mA DC and upper and lower limit alarm contact output (contact a).

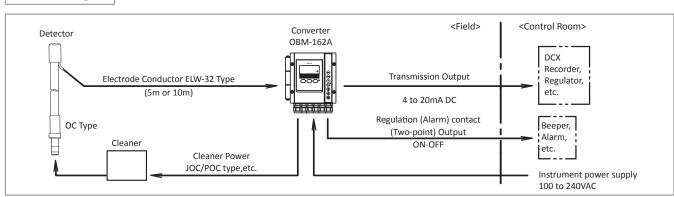

#### **Features**

- OAble to change transmission output range
- The output range can be set within the measurement range 0 to 50mg/L by using 0.01mg/L as the unit and above 1.00mg/L.
- OAble to determine whether the electrode is in good condition during calibration
  - In case normal calibration cannot be conducted, the meter will display "Zero calibration error", "Span calibration error" and "Low response"
- OTemperature display and output
  - The instrument displays the temperature of the sample and provides a transmission output of 4 to 20mA DC.
- OMeasurement value conversion
  - Measured values can be converted to a concentration value better suited to operation management needs.
- OEnable simple operation by the waterproof keys on the front panel
- All the operations can be carried out on the 10 waterproof keys of the front panel without opening

- OAble to resume detection mode automatically
  - After 2 hours maintenance mode, the system will resume measurement mode automatically.
- OCalibration history
  - The date, time, current value, and temperature at the time of calibration can be saved automatically up to 10 times. This makes it easy to save information for future reference.
  - (Optional)
- ○100VAC output for cleaner control
  - The combination of water-injection cleaner and pulse air-injection cleaner will need it.
- ○RS-232C output
  - In case dedicated communication cable is connected to RS-232C output, it will transmit data for the computer.
- OMembrane damage detection function
- In case the membrane is damaged, electrode abnormal signal will be output through dedicated electrode and dedicated cable.

## Structural Diagram

# **Standard Specification**

 $\hbox{Product Name} \qquad : Dissolved \ Oxygen \ Analyzer \\$ 

Model : OBM-162A Type

Measurement Method: Membrane polarographic method Measurement range: DO...0.00 to 50.00mg/L (resolution

0.01 mg/L

Temperature...-10.0 to 100.0°C (resolution 0.1°C)

SAT...0.0 to 200.0% (resolution 0.1%) without transmission output

(display only)

O<sub>2</sub>... 0.0 to 30.0% (resolution 0.1%) without transmission

Transmission output : DO...0.00 to 50.00mg/L

iransinission output • DO...0.00 to 50.00mg/1

range Upper limit side of the output range can be set from 1.00 to

50.00mg/L.

(in increments of 0.01mg/L)

Temperature...-5 to 100°C (display only) The minimum width is 10°C. (Both the upper and lower limit values can be set

in increments of 1°C)

Performance : Linearity, within 1FS, or 0.05mg/L

within the range of 0 to 2mg/L (equivalent input as a reference) Repeatability within 0.8% FS, or

0.04mg/L within the range of 0 to 2mg/L

(equivalent input as a reference)

Temperature  $: 0 \text{ to } 45^{\circ}\text{C}$ 

compensation

Alarm contact output: Number of circuits; 2 circuits, contact a.

Contact capacity; 250 VAC 3A or 30 VDC

3A or less (resistance load)

Sensitivity; Values within 5% of the transmission output range (2 points)

can be specified

Under maintenance: Contact closed during maintenance

signal output (contact a)

Contact capacity; 250VAC 3A or 30VDC

3A or less (resistance load)

Electrode error : Contact closed (contact c) when an

signal output electrode error occurs, such as when a

temperature compensation element error occurs or the membrane is

damaged.

Power cut-off signal : Provides a (contact c) signal outputted

output when a power failure occurs. Contact

capacity; 250VAC 3A or 30VDC 3A or

less (resistance load)

Under cleaning : Transmission output is held while a signal input closed contact input signal is being

outputted. No-voltage contact signal.

Display : LCD

Calibration method : zero; electrical zero or zero liquid

Span; atmosphere or Air saturated water

Transmission output: Isolated...4 to 20mA DC, load

resistance below  $650\Omega$ 

Ambient temperature: -20 to 55°C, below 95%RH (No freezing)

and humidity

Power supply 90 to 264VAC, 50/60Hz

Power consumption : approx. 10VA Structure : equivalent to IP65

Installation : 50A Pipe

(optional; mounted on wall or rack)

Material : body...aluminum casting

Window...polyester resin

Paint finish : silver (metallic gray), N1.5 (Munsell

Color System)

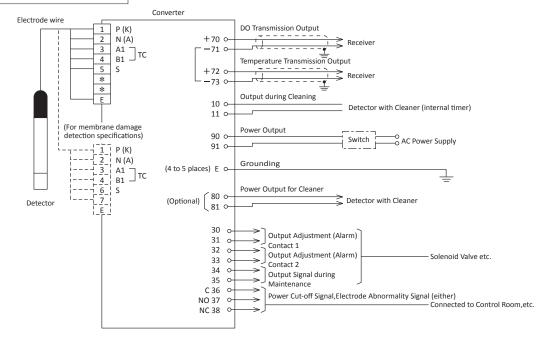

Terminal : cable connector x 6

(for cable with external diameter 6 to 12) Dismantle the cable connector and

connect to conduit (G 1/2×6)

Weight : approx. 2kg

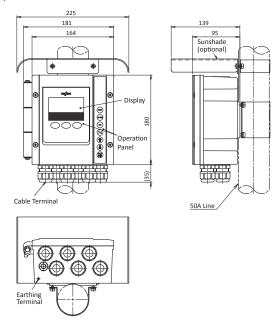

#### Diagram of Wiring between Devices

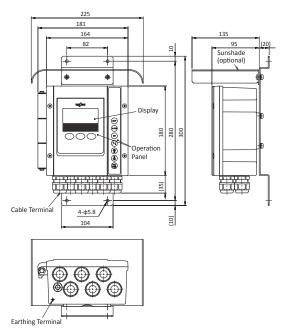

Unit: mm

### Mounted on wall or rack

#### **Product code**

- \*1. DO measurement range 0.00 to 50.00mg/L.

  The designated unit is 0.01mg/L, and the amplitude is over 1.00mg/L.
- \*2. The water temperature measurement range is ·5 to 100°C; please designate 1°C as the unit and the amplitude over 10°C.
- \*3. Since the output characters of different electrodes are different, please designate 7 combined electrode types correctly.
- \*4. This meter uses free power; the output voltage for controlling combined cleaner (JOC/POC, etc.) is limited to 100VAC.

Therefore, when user selects Yes, please note that the power supply for this meter is limited to 100VAC.

In case power supply is over 100VAC, please prepare a ZP-30 reducing transformer separately.

- \*5. In standard painting, Melamine resin shall be sprayed up and down with average membrane thickness of over 30µm and glossiness at G40.
  - Heavy-duty anticorrosion painting, epoxy resin shall be sprayed on the middle and down layers and Melamine resin on the top layer, till average membrane thickness of over 100µm and glossiness at G80.
- \*6. Porcelain lightning arrester (simple type) shall be installed on the power line and transmission line.
- \*7. The terminal has 6 x cable connectors  $\phi 6$  to  $\phi 12$ ; If the cable connector is dismantled, then use the screw G1/2 for cable conduit.

In the NPT1/2 requirements, there are 6 x adapters SUS304; please dismantle cable connector, and connect to terminal according to the required number; moreover, for the terminal and cable connector that do not use cable conduit, please maintain the original plug cock (plugged) state.

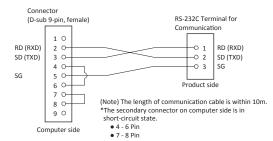

#### **Optional**

 RS-232C Communication Function

When user selects Yes RS-232 output, a RS-232C

Terminal block for RS-232C							
Terminal	Signal Code	Signal	Direction				
Number	Signal Code	NameDirection					
1	RD (RXD)	Receiving data	Input				
2	SD (SXD)	Sending data	Output				
3	SG	Earthing for signal transmission	_				

communication terminal will be added to the terminal, which can transmit digital test data to computer.

Structure of Special Communication Cable

# **Combined Detector**

The type, specifications and shape of the typical combined detector are shown as below. Please select according to installation and measurement conditions

The DO electrode installed is 7533L Type (ordinary; for sewage treatment), or 7536L Type (for defection treatment). The special conductor is ELW-32 Type. The DO electro de to install on the optional membrane damage detection is 7540L Type (for defection treatment). The special conductor is ELW-067 Type.
