SPECIFICATION SHEET

Compact City-Water Analyzer

MWB4-72

This analyzer is for continuous monitoring water quality (Maximum seven parameters) at faucet feed line or water receiving tank of a building.

In addition to the three items of turbidity, color, and residual chlorine, which are specified by law to be inspected daily, this analyzer can optionally conduct measurements of the electric conductivity, pH, water temperature, and water pressure.

The compact B4-size allows the MWB4-72 to be installed in narrow spaces. The MWB4-72 also delivers high reliability, durability, and excellent maintainability.

Safe design-Easy to read and operate

- The real-time readouts of the items measured appear on the large color display on the front panel. Along with readouts, the display also provides trend indication. This convenient feature makes it possible to analyze the cause of abnormality by referring the anteroposterior trends.
- 2) The operating part consists of an easy-to-read interactive touch panel.
- 3) The electrical part and analyzer are kept separate. This ensures the electronics remain insulated while protecting users from potential electric shock.

High reliability

- This analyzer features a unique debubbling method that effectively minimizes the formation of bubbles in turbidity and color measurements. In the event bubbles accidentally mingle, they can be completely removed by backwashing. These capabilities enable the analyzer to improve stablity of turbidity and color measurement remarkably.
- 2) Time-proven non-contact swing rotary type electrode is adopted for chlorine electrode. It enables stable measurement for long period in the combination with unique ceramic beads cleaning even sample flow is fluctuated.
- 3) This analyzer comes with an electronic dehumidifier designed to keep dew condensation from forming inside the unit. Eliminating dew condensation not only prevents rust from accumulating inside, but also enhances the durability of the equipment.

Wide variety of output options

In addition to DC 4-20 mA analog output, this device is also standardly equipped with two digital communication interfaces, RS232C and RS485. These two interfaces support the remote monitoring system.

Enhanced maintenance and operational performance

- Operations (such as cleaning and zero calibration) can be remotely controlled from the host system is possible via the use of contact signals or the digital signal interfaces RS232C or RS485. The effective remote control of operations can help cut down on labor and costs.
- 2) One minute values are stored in the internal memory in 3-month intervals, and one hour values are stored in 1year intervals. A memory card (optional) can also be inserted in the factory-supplied slot, making it possible to store and carry the data without the need for a computer.
- 3) The self-diagnostic feature provides advance notice about the current condition of the system, helping to make maintenance more efficient. It issues two different signals, "Caution" and "Warning", thereby enabling users to identify the severity of the problem.

Measurement items and performance

Measurement item	Measurement method	Measurement range	Minimum indicated value	Linearity	Repeatability
Turbidity	Transmitted light method	0 to 2/4 NTU	0.01 NTU+	Within ±2.5% FS	Within ±2% FS
Color	Transmitted light method	0 to 10/20 degrees	0.01 degrees	Within ±5%FS	Within ±3% FS
Residual chlorine	Polarography	0 to 2 mg/L	0.01 mg/L	Within ±2.5% FS	Within ±2.5%FS
Electric conductivity	AC 2-pole method	0 to 50 mS/m or 0 to 500µS/cm	0.1 mS/m or 1µS/cm	Within ±2%FS	Within ±2%FS
рН	Glass electrode method	pH 2 to 12	0.01 pH	Within ±0.1 pH	Within ±0.1 pH
Temperature	Platinum resistance thermometer method	0 to 50°C	0.1°C	Within ±0.5°C	Within ±0.5°C
Water pressure	DMOS* method	0 to 1 MPa	0.001 MPa	Within ±0.5% FS	Within ±0.5%FS

^{*}DMOS: Double-diffused metal-oxide semiconductor.

Standard Specifications

: Compact City Water Analyzer Product name

Model : MWB4-72

Objects measured: Three basic items (turbidity, color, and

residual chlorine), electric conductivity,

pH, temperature, and pressure

Measurement : Ability to switch between two ranges for

range switching both turbidity and color measurements.

Display : Color LCD touch panel

Temperature : 0 to 40°C for residual chlorine, EC, and

compensation range pH

Response time : 90% response within three minutes Operating power : 100 to 240V AC ±10%, 50/60Hz Power consumption: Approx. 40/55VA (100/240V AC), max.

of approx. 83/108 VA (100/240V AC)

Transmission : DC 4 to 20 mA, isolated output (Negative (-) side is common.)

Load resistance : 600Ω or less

Contact switching : Alarm 1; General alarms (measured value output signals High-High/Low-Low limit alarm, light source

error, residual chlorine motor error, sensor

error, and start-up mode error)

Alarm 2; General alarms (concentration upper/lower limit alarm, water temperature compensation error, and auto calibration error) Maintenance; When in ST-BY mode Event; During auto cleaning, during auto calibration, and during problem diagnosis (Contact capacity for all of the above; 24

VDC 0.2A resistance load))

Power cut off; The contact is closed when

a power failure occurs.

(Contact capacity; 30 VDC 0.2A

resistance load))

Contact switching : Cleaning command; When the closed input signals contact receives, cell window cleaning

starts (turbidity / color). Start cell window

cleaning (turbidity / color)

Calibration request; When the closed contact receives, automatic zero

calibration starts (turbidity / color / residual

/ residual chlorine).Start automatic zero calibration (turbidity / color / residual chlorine) (Resistance load; 200Ωor less, Pulse

duration: 500mS or greater)

Communication

system

: RS232C interface or RS485 interface

(isolated)

Communication speed; 9600 BPS Synchronous system; Start-stop

synchronization

Control system; Half-duplex communication system

One line for communication (dedicated cable or connector), one line for maintenance (D-SUB connector)

Save functionality: Data such as measurements can be

transferred to a memory card.(Compact Flash, CF) They can also be processed by

a computer.

One minute measurement values can be stored in 3-month intervals, and one hour. values can be stored in 1-year intervals.

Sample water : No suspension or stagnation.

conditions Quality; Ensures that the water quality

(excluding the items below) satisfies the water quality standards set by the Water Law or falls within the measurement range of this unit. Temperature; 0 to 40°C (no freezing)

Pressure; 0.05 to 0.75 MPa

pH; 5.5 to 8.6 pH (maximum fluctuations; 1 pH)

EC; 8 mS/m (80µS/cm) or greater

Flow rate; 50 to 100 mL/min

Sample : 5 m³/month or less (9 m³/month, including

consumption a by-pass flow of 100 mL/min)

Wetted part materials: Polyurethane, PP, acrylic, stainless steel,

FKM, etc.

Piping end connection: Sample water inlet; Rc 1/4

Drain outlet; Rc 1/4

Calibration solution inlet; Rc 1/4

Air purge; Rc 1/4

Installation : Mounted on a wall or rack Wiring end connection : Two water-proof connectors

A power supply cable and I/O signal cable (3-meter) are also included.

Ambient conditions : 0 to 40 $^{\circ}\text{C}$ (no freezing), 85% RH or less

(no condensation)

Weight : Approx. 11 kg

Construction : Indoor installation (IP43 equivalent)

Case material : Aluminum

Color : Light gray (Munsell 5PB 8/1 equivalent)
Automatic calibration : Zero calibration for turbidity, color, and

residual chlorine. The internal timer and an external contact signal are used to

start calibration.

(Zero water is prepared by filtering sample

water through a zero water filter.)
Calibration cycle setting; 0 to 24 hours

(freely specified)

Calibration time; Approx. 13 min. (fixed) Transmission output hold time during calibration; Calibration time approx. 13

min. + 9 min. (fixed)

Automatic cleaning: The internal timer and an external contact

signal are used to start backwashing (by draining the water) to clean the cell window for turbidity and color measurements. Cleaning cycle setting: 10, 15, 20, 30, or

60 min.

Transmission output hold time during cleaning; Cleaning time approx. 2 min. + 1

min. (fixed)

Beads cleaning of residual chlorine

electrode by self-rotation

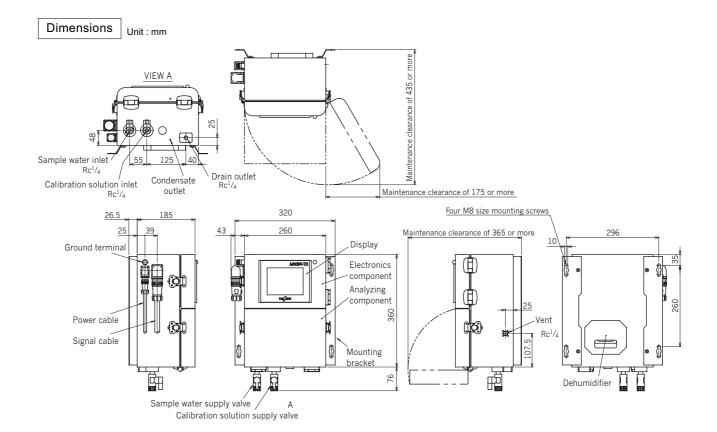

Options : Indoor self-standing frame (preassembled, piping pre-installed)

Outdoor cubicle (temperature-controller

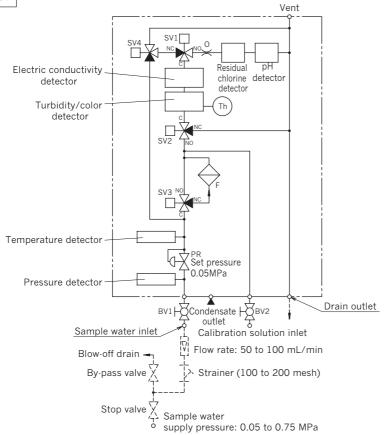

included)

Water sampling unit for abnormal time

Internal leakage detection unit

Flow sheet

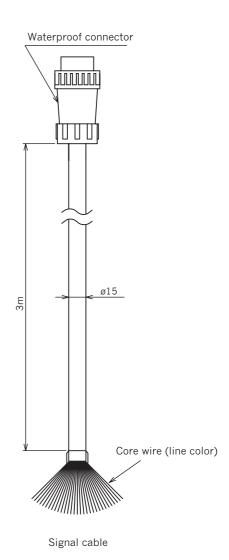

No.	Description
BV1	1Sample water supply valve
BV2	Calibration solution supply valve
SV1	Wash water solenoid valve
SV2	Drain solenoid valve
SV3	Zero water switching solenoid valve
SV4	Vent solenoid valve
Th	Temperature compensation sensor
F	Zero water filter
PR	Water pressure reducing valve
0	Orifice

Detectors for specified measurement items can be added (Maximum seven items).

Input/Output Signal Table

Connector No.	Line color	Signal type			Signal description

1. Installation conditions

Install the analyzer in a location that satisfies the following criteria:

- a) A location that is not exposed to rain, wind, or direct sunlight.
- b) A location where sample water meeting "4. Sample water condition" such as temperature and pressure etc. mentioned below, can be drawn.
- c) Vibration-free location
- d) A location where an electric device causing electric noise is not placed near by.
- e) A location with sufficient space around the analyzer that allows for safe and easy access during maintenance.

2. Mounting

The analyzer is designed to be hung on a wall or mounted on hooks. Before mounting the analyzer, make mounting holes in the wall, and then use four M8 screws to fix the unit in place. Make sure the upper surface of the main unit is horizontally level.

Weight: Approx. 11kg

3. Piping

- a) Use tubes for the sample water and drain piping to minimize the load applied on the valves of the main unit.
- b) Because pressure is applied to the piping on the supply side, use metal connectors (stainless) for the tube joints.
- c) Install both a stop valve and by-pass valve (which is also used for

flushing) on the supply side. Although the minimum required flow rate is between 50 to 100 mL per minute, we recommend maintaining a flow rate of 100 to 200 mL per minute for the water* flowing through the by-pass valve. *Water that initially flows from the faucet.

(This prevents water from stagnating and leads to shorter response times, resulting in more accurate measurements.)

Depending on the quality of the sample water, a strainer (100 to 200 mesh) can also be installed when needed.

- d) Make sure the end of the drain pipe is open to the atmosphere.
- e) Specify a length of pipe between the measurement point to the analyzer that enables the sample water to reach the analyzer in 3 to 5 minutes. Example: Approx. 3 to 5 meters at 13A (ø4 x ø6 size tubes, no greater than 3 meters)

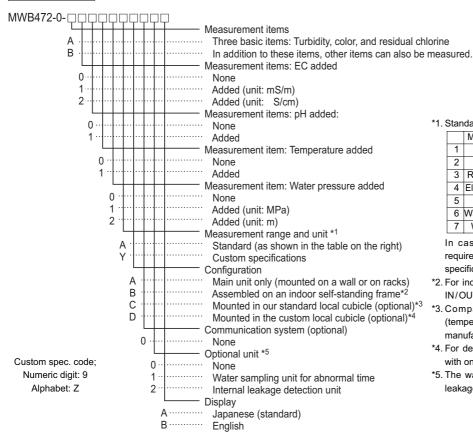

4. Sample conditions

- a) No suspension or stagnation.
- b) Consistent with the quality standards for city water set by the Water Law.
- c) Temperature: 0 to 40°C (no freezing)
- d) Pressure: 0.05 to 0.75 MPa
- e) Flow rate: 50 to 100 mL/min
- f) If air bubbles excessively mingled into sample water, it is required to arrange de-bubbling process in the preceding step to analyzer such as arrangement of bypass.

VIEW B-B

*1. Standard measurement range and unit

	Measurement item	Measurement range / unit
1	Turbidity	0 to 2/4 NTU (dual range)
2	Color	0 to 10/20 degrees (dual range)
3	Residual chlorine	0 to 2 mg/L
4	Electric conductivity	0 to 50 mS/m, or 0 to 500 µS/cm
5	pН	pH 2 to 12
6	Water temperature	0 to 50°C
7	Water pressure	0 to 1 MPa

In case that other customers' specifications are required, please contact us regarding availability of such specifications.

- *2. For indoor installation. The piping for the sample water IN/OUT and other items are preinstalled.
- *3. Compact and designed to be set up outdoors (temperature-controller included). For details about the manufacturing specifications, refer to the next page.
- *4. For details about custom specifications, please consult with one of our sales representatives.
- *5. The water sampling unit for abnormal time or internal leakage detection unit can be added as an option.

Manufacturing specifications for standard outdoor cubicle

This is our standard compact outdoor cubicle used to house the MWB4-72. It can also be used to house communication equipment.

Construction : IP23D, rainproof for outdoor use (sun

shade included)

Front door (doorstop included)
: SS400 (steel), SECC (sheet steel)

Board thickness : L40 x t5 (SS400), t2.3 (SECC)
Surface finish : Metallic silver, semi-gloss

Acrylic paint baked-on finish (cubicle), polyurethane paint baked-on finish (sun

shade)

Power requirements: AC Line ± 10% 50/60 Hz.

Power : Max. 300 VA including MWB4-72 consumption (consumption varies depending on the

ambient temperature.)

Wiring end : Three G3/4

connection

Materials

Piping end : Sample water inlet; Rc1/2 connection Drain outlet; Rc 1/2

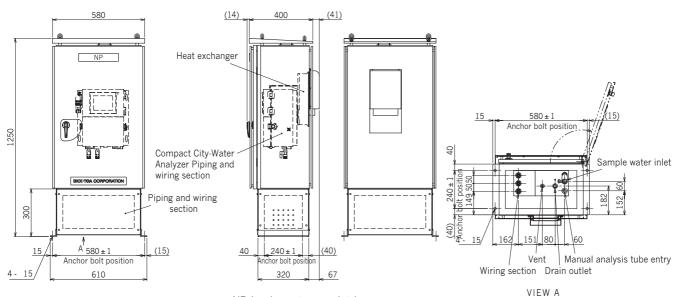

Weight : Approx. 130 kg (including MWB4-72)

Wetted part materials: SUS304, rigid PVC, PFA tube

Ambient conditions: -5 to 40°C, 85% RH or less (no freezing)

Equipped devices :

Product name	Rating
Heat exchanger	Max. 30 W
Dehumidifier	_
Panel heater	Max. 200 W
Breaker	5 AT
Lightning protection transformer	300 VA

NP (equipment name plate):

Please provide the information to be inscribed on the plate.

Please read the operation manual carefully before using producuts.
